Megamouth Sharks

There are megamouth sharks all over the world. The megamouth is very rare. The meamouth swims very slowly.

It is a shark of the deep sea 200m.

Megamouths are 4~5.5 meters long.

Fossilized Megamouth teeth have been found in 10,000,000 – 5,000,000 year old earth strata.

Because Japan has more earthquakes than other countries, we can see more Megamouth sharks.

Now we can see Megamouth sharks mostly in Asian seas, because Megamouth sharks fossil were found in North America and Europe.
It shows Megamouth sharks were distributed over the world in the later ages.

Megamouth sharks: Megamouth sharks surface by the crustal movement of the bottom of the sea in the shallows.
